-!- FUNCTION: Binds to the 238 rRNA.
-!- SUBUNIT: Part of the 508 ribosomal subunit. Interacts weakly with proteins L3 and L6.
-!- SIMILARITY: Belongs to the ribosomal protein L13P family.
                                                                                                                                                                                                                                                                                                                                                                                                                                 X-RAY CRYSTALLOGRAPHY (3.0 ANGSTROMS) OF THE 50S SUBUNIT IN COMPLEX WITH FIVE ANTIBIOTICS AT THE PEPTIDYL TRANSFERASE CENTER. -I- FUNCTION: Exchanges the guanine residue with 7-aminomethyl-7-deazaguanine in tRNAs with GU(N) anticodons (tRNA-Asp. -Asn. -His and -Tyr). After this exchange, a cyclopentendiol moiety is attached to the 7-aminomethyl group of 7-deazaguanine, resulting in the hypermodified nucleoside queuosine (Q) (7-(((4,5-cis-dihydroxy.2-cyclopenten-1-yl)amino)methyl)-7-deazaguanosine) (By

"Genome-based analysis of virulence genes in a non-biofilm-forming
Staphylococcus epidermidis strain (ATCC 12228).";

Mol. Microbiol. 49:1577-1593 (2003).

-!-CATALYTIC ACTIVITY: ATP + L-isoleucine + tRNA(Ile) = AMP +

diphosphate + L-isoleucyl--ENA(Ile).

-!-COFACTOR: Binds 1 zinc ion per subunit (By similarity).

-!-SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-!-SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-!-SUMILARITY: Belongs to the class-I aminoacyl-tRNA synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               29-MAR-2004 (Rel. 43, Created)

25-OCT-2004 (TrEMBLrel. 28, Last annotation update)
1soleucine--EXMA ligase (Isoleucyl-tRNA synthetase) (EC 6.1.1.5).
Name=ileS; ORFNames=BTZK3654;
                                                                                                                                                                                                                                                                                                      diphosphate + Lisoleucyl-tRNA(IIe).
--- COFACTOR: Binds 1 zinc ion per subunit (By similarity).
--- SUBUNIT: Monomer (By similarity).
--- SUBCELLULAR LOCATION: Cycoplasmic.
--- SIMILARITY: Belongs to the class-I aminoacyl-tRNA synthetase
                                                                                                                                                     STRAIN=168;

Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- CATALYTIC ACTIVITY: ATP + H(2)O = ADP + phosphate.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIPICITY: Found in most tissues except spleen and muscle. Most abundant in testis. Also detected in fetal tissues.
-!- SIMILARITY: Belongs to the cation transport ATPases family (P-type ATPases). Subfamily IV.
                                                                                                                                                              Gaps

TISSUE SPECIFICITY: During ventral enclosure of the epidermis,
expression is seen in clusters of presumptive head neuronal cells
and several cells in the tail region. Early larvae show expression
in the nerve ring and ventral nerve cord. Strong expression is
also seen in the procorpus and terminal bulb of the pharynx.
Expression in the nervous system is seen through to adulthood.
SIMILARITY: Belongs to the Tyr protein kinase family. Ephrin
sceptor subfamily.
SIMILARITY: Contains 2 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                 MEDLINE=98165343; PubMed=9506518; DOI=10.1016/S0092-8674(00)81131-9; George S.E., Slmokat K., Hardin J., Chisholm A.D.; "The VAB-1 Eph receptor tyrosine kinse functions in neural and epithelial morphogenesis in C. elegans.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  closure of the epidermis.
CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                                                                                    The C. elegans sequencing consortium; denome sequence of the nematode C. elegans: a platform for investigating biology."; Science 282:2012-2018(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MormBase; MSG-100006868; vab-1.
